

Hello, I'm an experienced developer from Ukraine, currently I live in Bulgaria. See please notes about my experience in my resume <https://www.vb-net.com/Resume/JobBg-Resume.pdf> and my LinkedIn profile <https://www.linkedin.com/in/viacheslav-eremin-59b459b2/recent-activity/all/>

A couple of my last projects, refactoring <https://www.lidget.co.uk/>, refactoring <https://www.tariffdatasystems.com/>, clone of <https://www.bountycompetitions.co.uk/>, refactoring <https://www.giftrepublic.com/> and a lot of new projects from scratch, what disappeared by financial reason of projects owner, see please full list of my projects with small descriptions in my resume.

More About me and what I can doing:

I'm ready to implement any projects with my horizon (please see more details on 8 points below what kind of tasks I doing). For my opinion VB.NET is most productive programming lang in the world, therefore I can make ANY kind of application on Visual Basic quickly and without trouble. Also on 10-20% of my projects I use Typescript and C# (if extremely RAPID and productive programming don't need and customer agree to use just ECMA-standard programming languages).

1. I can make any software applicable to Visual Basic and C#: any Web site (especially ASP.NET my main profile on Web development, I can extend any ancient ASP site to new functionality, I use ASP.NET Classic - this is my prefer way for Web, ASP.NET MVC, ASP.NET Blazor, ASP.NET Core), any Desktop app, any apps with Excel, any kind of B2B and Backend apps (based on SOAP/WSDL or REST), any Bots, any library (including ActiveX), any stable Windows and Linux services (.SO modules), any Linux console utils, I can integrate any 3rd part API (include payment gateway) to any web or desktop project.

I don't know PHP, but I can extend any PHP project (on Linux or Windows platform) with new function on Visual Basic and on the opposite side I can integrate any PHP code fragment to any ASP.NET site on Linux or Windows platforms (including AU).

2. I can make any app with Typescript and Angular, but I have less experience with TS/Angular, for Example I pass 80+ projects on Visual Basic, but only 3 projects with TS/Angular, however I'm ready to make any app on Typescript/Angular (including SignalR and RxJs frameworks).

3. I can make any task related with HTML/CSS (including Bootstrap and FontAwesome), including HTML markup from Figma, Also I can create Picture/Images/Logo/Icon by GIMP and can edit/transform video with Blender.

4. I can make mobile phone apps for IOS and Android, there are dozens of various technology for Mobile phone, from React Native to Dart and Swift, from Java and Kotlin to Python, but most clear fast and understandable for me is NativeScript. With Android Studio and Java I'm on learning stage now.

5. I love various Cloud technology, a couple of project I have deployed to Google Cloud, but my liked cloud is Cloudflare and Cloud based Hetzner KVM, not so popular cloud, but faster, cheaper and simple than AWS and Amazon. Also I can use Firebase, Supabase, Versel.

6. I can make any SQL tasks including creating huge sophisticated amount of procedures with transaction, can create SQLCLR custom function on Visual Basic, can make any SQL tuning and optimization.

7. Also I can make any Linux administration task, including any custom data processing utility on Visual Basic, including VPN and various Virtualization, including KVM (my prefer way), Docker, VmWare, VirtualBox.

8. Also I still remember programming on VB6 and Adobe Flex (ActionScript).

I have permission to work in any country of EU, because I have protection from EU from war in Ukraine.

My English is very close to fluent.
